

# AWS Security Assessment

Quickly find out security vulnerabilities in your AWS environment!

## Reliable 3-stage process:

Ensuring AWS environment security is an ongoing process that benefits from conducting a 3<sup>rd</sup> party audits. TD SYNEX provides security maturity survey with personalized steps for companies with different security needs and helps with AWS APIs scan to identify vulnerabilities categorized by priority. A unified process concluded with ready to present reporting, to act fast on findings.

This service is especially suggested as a yearly audit or as a response to major organization changes or post-incident activities.

**Investigate  
vulnerabilities**

**Confirm  
protection**

**Ensure  
compliance**

## Schedule and pricing

**Security Maturity assessment:** 2–4-hour meeting with certified security expert.

**Technical analysis:** Isolated environments compliant with minimal impact on workloads – even in 1 hour.

**Security Business Case:** High-level, ready to present report backed up with deep analysis output files.

**Flexible pricing:** 1000 EUR per engagement + 50 EUR per AWS account

**Act with speed – single day delivery available!**

### Assess, then what?

The AWS Security Assessment service does not include remediation hours but is a door opener for introducing new AWS security-related services in a way that supports organization's natural growth, without quadrupling current security budget. The remediation can be done by the end-customer, with reseller's help or in collaboration with TD SYNEX Professional Services team.

Sample report available!

**Schedule an  
introduction call!**
