DELL Technologies AUTHORIZED DISTRIBUTOR

Microsoft

Unlock performance, security and AI innovation.

With Windows Server 2025 and Dell PowerEdge servers.

Learn more

Microsoft Windows Server 2025 introduces powerful new capabilities designed to strengthen security, improve performance and support emerging AI workloads.

When deployed on Dell PowerEdge 17G servers, Windows Server 2025 provides a modern, scalable platform built for **automation, resilience** and **hybrid operations.**

However, organisations should not delay the transition. Windows Server 2022 mainstream support ends in October 2026, and waiting too long can increase security risks and lead to rushed migration projects. Planning the move now helps organisations stay **protected, supported** and ready for **future innovation.**

Why move to Windows Server 2025 now

Stronger security and resilience

Protect systems and data with enhanced identity protection, advanced encryption and improved threat defence.

Features like Credential Guard, LDAP encryption and improved patching help strengthen security while reducing operational disruption.

Higher performance for modern workloads

Support demanding applications, analytics and AI workloads with improved scalability and processing performance.

Windows Server 2025 enables organisations to handle larger data volumes while maintaining reliability and efficiency.

Hybrid-ready infrastructure and flexibility

Seamlessly connect on-premises environments with hybrid and cloud platforms.

Windows Server 2025's flexibility enables organisations to optimise resources, support modern applications and accelerate innovation across their IT environments.

Running outdated infrastructure can expose your customers to unpatched vulnerabilities, compliance challenges and performance limitations. **So don't let them fall behind.** Act now to support their transition to Windows Server 2025.

TD SYNNEX

DELL Technologies AUTHORIZED DISTRIBUTOR

Microsoft

Power innovation with Dell PowerEdge 17G

When combined with Dell PowerEdge 17G, Windows Server 2025 delivers a powerful platform designed for modern IT environments.

PowerEdge servers enable organisations to accelerate transformation anywhere – supporting:

AI-driven innovation

Automation

Zero-trust security

These intelligent systems provide scalable performance, advanced management capabilities and built-in security features to support diverse workloads.

Together, Windows Server 2025 and PowerEdge 17G help organisations modernise infrastructure, improve operational efficiency and prepare for future growth.

Why work with TD SYNNEX

As a trusted IT distributor, TD SYNNEX supports partners throughout the server transition journey.

With certified specialists, financial programmes, quoting support and training resources, TD SYNNEX helps partners deliver modern server solutions and accelerate go-to-market success.

Together with Dell Technologies' industry-leading infrastructure, partners can provide secure, scalable and future-ready solutions for their customers.

Start planning the transition today

Don't wait until the support deadline arrives.

Start planning the move to Windows Server 2025 on Dell PowerEdge 17G today.
